**DETAILED ACTION**      **BEST AVAILABLE COPY**  
***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1 thru 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Komuro

‘145. Komuro discloses (see, for example, FIG. 12) a semiconductor device comprising slits (alignment marks) 53a, 53b, 54a, 54b, 55a, 55b, and trenches 52a, 52b. FIG. 12 clearly shows the distance between the trenches and the set of slits between 5d and 80d wherein d is the distance between the individual slits.

***Response to Arguments***

3. Applicant's arguments filed 10/21/02 have been fully considered but they are not persuasive.

Regarding applicant's argument that Komuro's invention is not drawn to scale, this is not found persuasive due to the fact that the Examiner is not relying on Komuro to disclose a specific numerical distance. Instead Examiner is only using Komuro to show a distance between the trenches and the set of slits being between 5d and 80d wherein d is the distance between the individual slits. This is clearly shown in FIG. 12 of Komuro.

For example, looking more closely at FIG. 12, Komuro discloses alignment marks 53a, 53b that have a distance  $d$  in between. By taking this distance and comparing it to the distance between the trenches 52a, 52b and the set of alignment marks, there is no doubt that the distance between the trenches 52a, 52b and the set of alignment marks falls between  $5d$  and  $80d$ . Therefore the rejection is still deemed proper.
